

Runway Repair

04 February 2012,

Runway repairs in preparation for resealing of runway 04/22 commencing 07 February

The repair work required was levelling of the runway surface which meant areas were dug out and refilled with asphalt. This milling machine was brought over from the Christchurch depot. It grinds up the area that needs repairing.

The asphalt machine at work on a repair patch.

The weather was definitely in our favour with fog cancelling all flights which gave us the extra time needed to complete the project without having to down tools to wait for the scheduled service.
